## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. Claims 1-20, 47-51, and 116-144 are allowed.
2. The following is an examiner's statement of reasons for allowance:
  - \* The copy of the postcard indicating the original letters patent was received concurrently with the specification on November 27, 2001 has been submitted on 8/18/2003 along with the Response to Office Action;
  - \* Amendment was filed on 11/30/2007 to remedy defects as to the form of the Amendment filed on 7/9/2003;
  - \* Reissue Application Declaration has been submitted on 11/30/2007;
  - \* The present invention provides a multiple resolution sensing apparatus comprising a geometric layout and use of a photosensor array constructed to be able to yield multiple resolution resulting images from different sized original images (specification, col. 1, lines 47-50), wherein the photosensor array is relatively inexpensive and easy to manufacture, and the resulting device is also relatively compact and can be used in color contact-type image sensing applications (specification, col. 1, line 66 - col. 2, line 4). Particularly, the following claimed subject matters are not taught by the prior art, taken either singly or in combination:
    - density of photosensitive elements within the second photosensor segment is greater than density of photosensitive elements within the first photosensor segment; using some photosensors for multiple resolutions while other photosensors are used for only one resolution (see independent claim 1);

Art Unit: 2624

- scanning different portions of the same image within photosensor segments having different densities of photosensitive elements; scanning is done using the second plurality of photosensitive elements within the second photosensor but not using the first plurality of photosensitive elements within the first photosensor segment, wherein the second resolution is greater than the first resolution (see independent claim 10);

- automatically selecting resulting image resolution based on an original image, wherein: when the original image has a width within a first predetermined range, selecting a first resolution; when the original image has a width within a second predetermined range, selecting a second resolution; when the first resolution is selected, scanning the original image at the first resolution; and when the second resolution is selected, scanning the original image at the second resolution (see independent claim 20);

- at least one third photosensor segment having a plurality of third photosensitive elements for scanning at a third resolution, the at least one third photosensor segment adjacent to the at least one second photosensor segment, wherein the plurality of third photosensitive elements has a higher density than the plurality of second photosensitive elements so that the image is scanned at the higher resolution with the plurality of third photosensitive elements than with the plurality of second photosensitive elements (see independent claim 47 and dependent claim 121).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should

Art Unit: 2624

preferably accompany the issue fee. Such submissions should be clearly labeled

“Comments on Statement of Reasons for Allowance.”
